# A SUGGESTED MODIFICATION IN THE MAKE-UP OF THE "CURRENT LIST."

The third year of the Current List is now drawing to a close and this is deemed an opportune moment to consider changes which if put in effect would increase the usefulness of the publication. The opinion of those who use the Current List is particularly desired concerning a suggestion to abandon the admitted imperfect classification of the journals into the fifty subdivisions of medicine as listed on the front cover and to substitute for it an alphabetical arrangement of the journals according to the most widely accepted abbreviation of their titles.

The principal criticism of the present classification, as made by several of our Friends, is that it is misleading in that journals predominantly concerned with one branch of medicine are frequently grouped with others of an entirely different character. When these are not to be found where they would naturally be expected, the consequence is that they are overlooked or are located with difficulty.

Since it may be assumed that no one will be interested in all the journals covered by the Current List, the prime object naturally will be to arrange them in such a manner as to permit each person to find the particular journals in which he is interested, with the minimum of trouble. The question, therefore, is whether an imperfect classification has sufficient advantage to make it preferable to a single alphabetical arrangement including all the journals. This is a question which those who use the Current List are better able to decide than are those responsible for its publication. Expressions of opinion on this and other changes designed to increase the usefulness of the Current List are, accordingly, earnestly solicited from everyone who sees it.
